

# **AUTONOMOUS COLLEGE EXAMINATION SOFTWARE**

**Modern college of ACS, Ganeshkhind, Pune.**

In the dynamic landscape of modern education, technology continues to play a pivotal role in transforming traditional practices. One such innovation, the Autonomous College Examination Software, is revolutionizing the way examinations are conducted in higher education institutions. This software represents a paradigm shift from conventional pen-and-paper assessments to a streamlined, efficient, and secure digital examination system. At its core, the Autonomous College Examination Software is a comprehensive platform designed to handle the entire examination process autonomously, from question paper generation to result declaration. The software leverages cutting-edge technologies such as artificial intelligence, machine learning, and block chain to ensure integrity, reliability, and fairness in assessments.

The software is basically built up with ASP .Net programming language that contains MVC architecture. There are three phases in software 1) Model - that contains database related contents and some structures... 2) Views - this contents actual view of software means HTML pages or aspx pages. 3) Controller - this contains some methods or programs that control the database and views.

Also for database level we are using SQL server 20 database management system that stores data more efficiently and easy to handle.

Following are the stages or life cycle of our autonomous college examination software...

### **Stage No. 1:**

The first stage of the examination process involves masters definitions filling. Traditionally, the definition involves Letter grades, Grade points, Exam event, Subject and sub-subject definitions and Result setting concepts. However, with the Autonomous College Examination Software, this task is automated we can copy already defined definitions from existing event. This not only saves time for faculty members but also enhances the quality and consistency of assessments.

### **Stage No. 2:**

The second stage involves the registration of students for particular exam event that will store student exam related data event wise. If there are multiple students to register we can register them through Multiple student exam registration form or from single student registration we can register only one student.

### **Stage No. 3:**

Before the day of the examination, we can generate seat numbers and students can access Exam Hall tickets through a secure online portal by proper definition done in exam time table. Also we can generate block assignment reports that will help to assign students in particular block.

### **Stage No. 4:**

Once the examination is completed, we can enter marks to students through marks entry form also or through excel sheet. We can import the marks more efficiently in system also we can lock the subjects to enter or edit the marks from an unauthorized person. We can also edit and save the marks even if there is mistake happened while entering marks. The student marks entry report is helpful to verify that entered marks are correctly stored or not in system.

### **Stage No. 5:**

One more important task is Process the results - we can process the result for a particular student also or for whole class. After that process the mark-sheet are generated and ledger reports also generated. Once all results are processed we can lock them to avoid data correction or misuse from any user.

In conclusion, the Autonomous College Examination Software represents a significant advancement in the field of education technology. By harnessing the power of AI, machine learning, and block-chain, it offers a robust and secure platform for conducting examinations autonomously. With its ability to streamline processes, ensure integrity, and improve student experience, this software is poised to revolutionize the way examinations are conducted in higher education institutions.

Following is mark-sheet and ledger report that are generated after processing results.
